

Week 2

Name: MUHAMMED DANISH M P

Mobile: 9497449053

Personal Development Workouts

1. Watch the movie “The Pursuit of Happiness” and prepare an audio summary about it.

It was an interesting task to see the movie. When I see this task I am very excited to watch this movie and after completing the task I realise so many things from this movie. I hardly watch hollywood movies but this movie was recommended by many and now I would like to recommend this movie to all. At least once in time, this should be watched. I think this movie conveys more about impotence of love dedication hard work and so on. It's very good movie this has a good knowledge about the rejection He got so many rejects at the movie. This movie is said to be a real story. In this movie there are more problems faced by him and I have a good experience. The pursuit of happiness also taught the lesson of not giving into despair. Even if it may seem hard, tough, you might get angry or stressed. The value of it all is to keep pushing on because hard work always pays off in the end. This was depicted as Chris and his son being told no a couple of times, and still being able to hold their heads up in it all. Like for instance, life can be so good that just when things are finally looking up, it can be turned around so fast. Leaving them back to where they started. Life does this for a reason as in giving people second chances. Starting over just makes people want to give up, but they never know that the overcome can even be greater than the outcome they had before.

The only downside of this movie was the directors making it appear as if the world revolves around money. In life everyone knows that money matters. It's just the natural way of life. But in the Pursuit of Happiness, it makes money seem as if a person does not have it, they cannot live without it or in other words money buys happiness. Chris may have not been happy with his previous job, but it paid, it just didn't pay enough. Once he saw a better opportunity without knowing the details, he jumped at it. Along with that being said, this is what makes people believe that The secret to success or happiness is money.

Technical Workouts

1. Learn JavaScript & Bootstrap by the end of this week.
2. Design a public website using HTML, CSS, JavaScript, Media queries and bootstrap. Website must be completely responsive.
3. Complete an excellent personal website using a template. The website should meet the following criteria:
 - a. Should be responsive.
 - b. It should contain at least six pages.
 - c. Should not contain any dummy content or images.
 - d. Enquiry form with validation and submission.
 - e. Social media links with proper contact details.
4. Read the document below and check the performance of your website. Improve your website until you acquire a score above 90.
<https://developers.google.com/web/tools/lighthouse#devtools>
5. Also learn the concepts:
 - DOM manipulations and selectors.
 - addEventListeners (click, scroll, change).
6. Host your project on Github

Learning JavaScript and Bootstrap can be a great way to start your career as a web developer. JavaScript is a versatile language that can be used to create a wide variety of web applications, and Bootstrap is a popular framework that can help you to create high-quality websites quickly and easily. JavaScript is a programming language that is used to add interactivity to web pages. It is one of the most popular programming languages in the world, and it is essential for any web developer to know. Bootstrap is a front-end framework that provides a collection of reusable HTML, CSS, and JavaScript components. It makes it easy to create responsive and mobile-first websites.

-

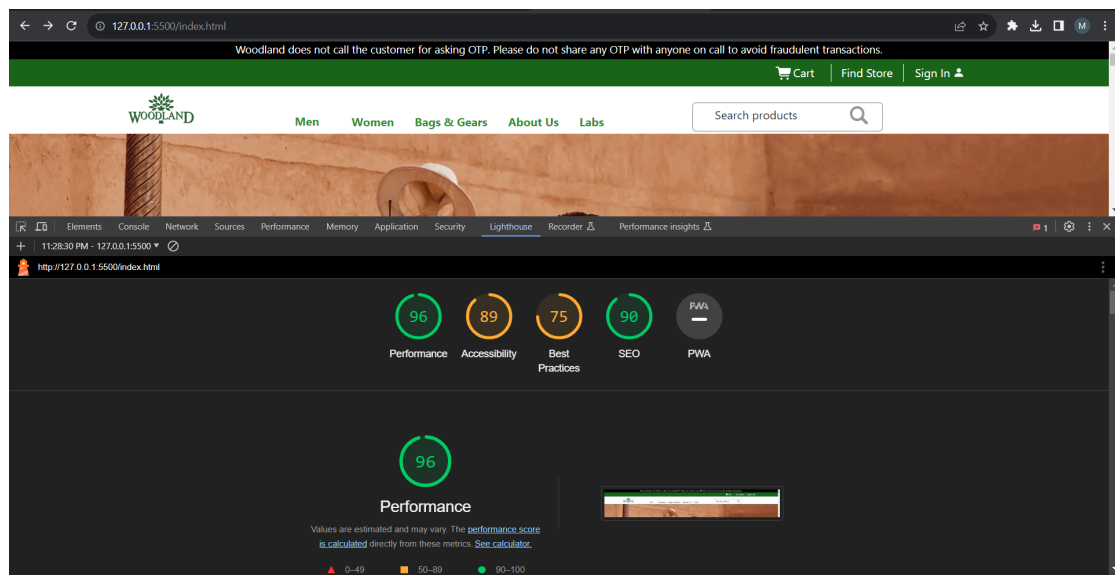

At the beginning of this week i don't know anything about the JavaScript and Bootstrap. It's quite difficult to study this but I came forward to study this and I watched the youtube channels like yestech media and all other tutorials. I started making the website and also along with the making of the website. I stuck at some part of making the website but later I studied a lot to improve myself and gather so much knowledge about that and now I am happy to say that I have more knowledge about the topic. The JavaScript is used to control company things like on click event listeners and so on. This is actually very useful for us when we make a new website. Now I almost make a responsive website by using bootstrap and javascript.

<https://mpdanish.github.io/Woodland/>

At first I didn't know how to make a personal website . It was easy to get the template and edit in that template. I searched the google for the template and found a good template for my personal website. My template was taken from w3 layouts website and i edited my pictures and set the link to the social media it's totally responsive so that it's so easy to do the work also i have put my projects in the personal website and set to host at github. It's an interesting task in this task and i have very interest to set my personal website and it's good to have some time to improve myself. later i added the location in that website and made it more colourful and good looking. Now i am happy to see my own website.

<https://mpdanish.github.io/Portfolio/>

This is the task to look the performance of the website and i followed the instruction that is given in that link and i got performance above 90 so i am very happy to see that my website is good and also responsive . i have been taken a website which is hard for me to complete but i took it as a challenge and completed the work. So I am very happy to say that I made a responsive website. i have got performance of 96 so that i am very happy to see it and also in lightroom the accessibility is 89 I tried to improve my website and now it's almost responsive

At the end of this week I went through some youtube channels and referred to some tutorials to study the event listener and DOM manipulation .

DOM manipulation in javascript is the process of interacting with the DOM API to change or modify an HTML document that will be displayed in a web browser. By manipulating the DOM, we can create web applications that update the data in a web page without refreshing the page. The DOM stands for Document Object Model.

An event listener is one which is used to target an activity on the website and perform a specified function so that we can perform some actions according to the action that a user is doing in the website.

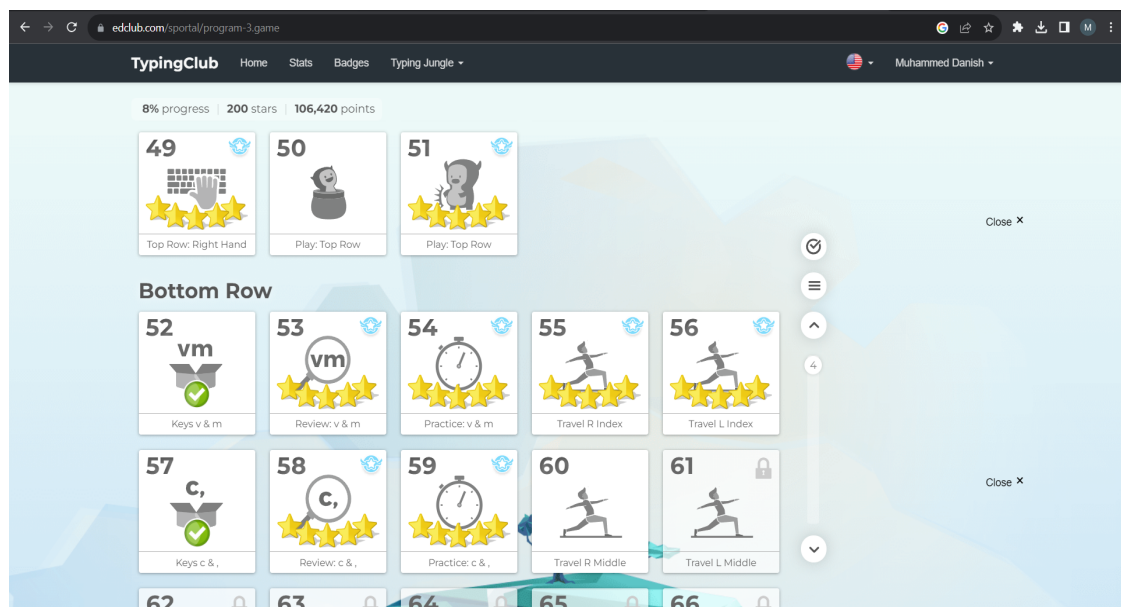

After studying the event listener it's very useful to me because in place of the on click function we can have the event listener.

Miscellaneous Workouts

1. Practice typing club for at least one hour each day. Finish as many chapters as possible as you can. Don't spend more than an hour each day.
2. Prepare a topic for the tech seminar. Record and upload it on youtube as an unlisted video.

3. Conduct a feedback session by the end of this week.
4. Prepare your progress video for the last week. Record and upload it on youtube as an unlisted video.

On my laptop I have never typed without looking at it and when I heard about that the perception equals reality. A developer should learn and type without looking at the keyboard. I actually don't know about finger position now. I know that I am a little bit better than before. Now I know each letter on the keyboard. Now I am focusing on accuracy. I think it would be good without accuracy. It would be dumb And the website typing speed test was really addictive and had a great sound effect. Once we entered the website we would challenge ourselves and I think that typing was necessary for a software engineer.

This is a video about Cloud Storage. The link of video is given below I think this was a great thing provided by the Brototype. We can learn about new technology so we are updated on the technology . and also we can improve our communication and we can completely remove our stage fear and we can attain fluent communication with this task also we can analyse ourselves how much I need to improve at the last of the brocamp. Only consistency is the key to attain a habit. So we can change our English gradually to the best of our version.I have knowledge about how to upload a video to youtube and visibility settings. So that the upload process was simple to me and this video was

shooted one day before the review. Really we didn't care about this. So we struggled to take video and I haven't edited this video. I have mentioned below.

<https://youtu.be/47mCfK8LpRM>

https://docs.google.com/document/d/1B07Qo5GeFSckPQMiqH5WkTsNSdMsEYITz92z5Jk06_k/edit?usp=sharing

I think this is the best way to analyse our progress about our start fear and communication as well as shyness. I really feel great while watching my video and have some self confidence. As I mentioned above in the tech seminar topic this is also needed to upload in a public platform. When I heard about that, It was really disgusting. But after taking 2 takes it became interesting. It was a great thing. When we upload our own video to any public platform after some weeks and Reopen it, I'm very excited. I think I will reach a saturation level with this description.

<https://youtu.be/BmstMPI2SrU>

Extra Assignments

1. Rejection task: get a website designing work. Record a video about your rejection experience and upload it on youtube as an unlisted video.

When I see this task this is more to improve the courage so that we can improve the courage. I went outside to take the rejection and talked to so many shopkeepers to do a website but unfortunately it failed but i will keep trying to do some more rejections.
